APPROVAL OF STATE ENGINEER

This is to certify that I have examined the foregoing application, and do hereby grant the same, subject to the following limitations and conditions:

This permit to change the point of diversion and place of use of the waters of an underground source as heretofore granted under Permit 62635 is issued subject to the terms and conditions imposed in said Permit 62635 and with the understanding that no other rights on the source will be affected by the change proposed herein. The well shall be equipped with a 2-inch opening and a totalizing meter must be installed and maintained in the discharge pipeline near the point of diversion and accurate measurements must be kept of water placed to beneficial use. The totalizing meter must be installed before any use of the water begins or before the proof of completion of work is filed. If the well is flowing, a valve must be installed and maintained to prevent waste. This source is located within an area designated by the State Engineer pursuant to NRS 534.030. The State retains the right to regulate the use of the water herein granted at any and all times.

This permit does not extend the permittee the right of ingress and egress on public, private or corporate lands.

The well must be sealed with cement grout, concrete grout or neat cement from ground level to 100 feet.

The State Engineer requires that the current Dixie Flats monitoring program, dated March 1999, be continued during the operating mining project. The program records both the water levels in observation and monitor wells and surface water flow measurements.

The total combined duty of water for consumptive purposes under Permits 73398, 73399 and 73400 shall not exceed 587.8 million gallons annually, and the total combined diversion rate of Permits 73398, 73399 and 73400 shall not exceed 6.0 cubic feet per second.

Monthly records will be kept of the following: the volume of water pumped from each well and the volume of water consumptively used for mining and milling uses projectwide. These records must be submitted to the State Engineer on a quarterly basis, within 15 days after the end of each calendar quarter.

The State Engineer retains the right to impose future conditions as necessary upon review and evaluation of all data submitted relative to this project. The State Engineer retains the right to regulate any and all other groundwater withdrawals herein authorized to protect the public interest and existing rights.

All of the above stated conditions are issued subject to having no adverse impacts on existing rights.

(Continued on Page 3)

This permit is issued under the preferred use provisions of NRS Chapter 534. The manner of use of water under this permit is by nature of its activity a temporary use and any application to change the manner of use granted under this permit will be subject to additional determination and evaluation with respect to the permanent effects on existing rights and the resource within the ground water basin.

The issuance of this permit does not waive the requirements that the permit holder obtain other permits from State, Federal and local agencies.

The amount of water to be changed shall be limited to the amount which can be applied to beneficial use, and not to exceed 2.0 cubic feet per second, **but not to exceed 196.0 million gallons annually.**

Work must be prosecuted with reasonable diligence and be completed on or before:

**October 23, 2007**

Proof of completion of work shall be filed on or before:

**November 23, 2007**

Water must be placed to beneficial use on or before:

**October 23, 2008**

Proof of the application of water to beneficial use shall be filed on or before:

**November 23, 2008**

Map in support of proof of beneficial use shall be filed on or before:
